

Autism Screenings

A child with autism might:

- Not point at objects to show interest
- Have trouble relating to others
- Avoid eye contact and want to be alone
- Have trouble understanding other people's feelings or talking about their own feelings
- Have trouble adapting when a routine changes

Child Guidance offers autism screening, lasting 1 – 2 hours, for children 18 months to 8 years old. Screenings are to determine if further evaluations are needed. Parents will receive results and a written report at the end of the session.
